

## Drainage Benefit Assessment Areas (DBAA) Fact Sheet Environmental Services

Benefit area funds are collected by the County on property tax bills. Funds are used for the operation and maintenance of equipment and fixtures, all of which remove and/or drain excess ground and surface water in order to maintain slope stability. There are 15 DBAAs located in the City of Santa Clarita comprised of various equipment and fixtures such as pump stations, observation wells, hydroaugers, and drainage swells.

Operation and maintenance of the subsurface drainage facilities involve:

- periodic inspection, monitoring, and evaluations;
- unclogging and clean-out where necessary;
- annual geologist review with a report and recommendations;
- installation of dewatering devices and other mitigation measures; and
- periodic repairs, when necessary.

Estimated revenue for fiscal year 2018-19: \$446,827

Projected expenses for fiscal year 2018-19: \$230,184

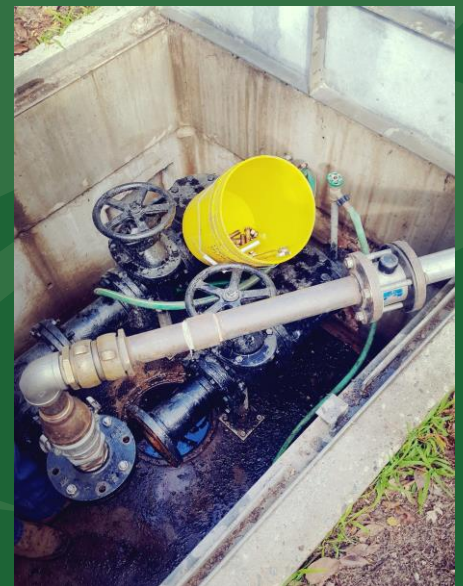

DBAA #6 pumps about 2,000 gallons per day

DBAA #18 pumps about 15,000 gallons per day

DBAA #19 only requires pumping if the winter/spring precipitation is well above average

DBAA #2008-2 is the only DBAA located within a commercial zone

DBAA #33 is located within the recently annexed Skyline Ranch area
